

TÄRNSJÖ GARVERI

OUR LEATHER RANGE

TÄRNSJÖ

GARVERI
HOUSE OF LEATHER

OUR PHILOSOPHY

In a world where speed often takes precedence over quality, at Tärnsjö Garveri we have chosen a different path – slower, but more meaningful.

We are one of the world's last tanneries still practicing vegetable tanning – with pride, with care, and with full respect for nature. Here we create leather that not only tells a story but also carries a future. Everything happens locally. Under one and the same roof. From raw hides from local slaughterhouses to finished products. Every step

is characterized by craftsmanship, tradition, and a deep commitment to sustainability. Our materials can be found in iconic furniture, at exclusive hotels, and in environments where every detail is carefully considered. It is only when you see it, touch it, and breathe in its scent that you fully understand its true value and its endless possibilities.

GOOD TO KNOW

ANILINE

Aniline-dyed leather is dyed all the way through in the drums without being covered by additional layers of color during finishing. The result is a vibrant surface with natural variations and a wonderful feel.

SEMI-ANILINE

Semi-aniline dyed leather is also drum-dyed but receives a thin layer of color during finishing. This gives the surface a slightly more even tone.

SPLITTING

If thinner leather is desired, we can split it to the thickness that suits your needs. Feel free to contact us to find out which measurements are possible.

FLESH SIDE TREATMENT

If a finer flesh side (the back of the leather) is desired, we can apply a flesh side treatment. This reduces the risk of color transfer from the leather.

EMBOSSING

We can emboss the leather with various patterns. Contact our sales department to learn more about the available options.

STRAPS

If you want a hide cut into strips, we can do that. The straps are cut to the desired width in varying lengths.

MILLING

The leather is softened by tumbling in large rotating drums. This mechanical process makes the fibers in the material more flexible during treatment. It also gives the leather a natural grain structure.

OUR SELECTION OF LEATHER

We offer a wide range of vegetable-tanned leather suitable for many different products. Our selection includes everything from soft upholstery leather in thicknesses of 1.1–1.3 mm to grain leather up to 4 mm thick.

SWEDISH HIDES

We work exclusively with the finest raw materials available, sourcing hides from our local surroundings. All leather is made from Swedish bovine hides.

TRACEABILITY

We are committed to working only with sup-

pliers who prioritize sustainable practices and high quality.

Each batch of hides is marked with a unique number to trace its origin.

This traceability system serves two purposes: it allows us to identify hides of premium quality, and it enables you to pre-order leather that is traceable all the way back to the farm.

TÜV CERTIFICATE

Our leather is tested and certified to be free from harmful substances.

LEATHER CARE

With proper care and maintenance, vegetable tanned leather will age naturally, develop a beautiful patina and last for generations.

PROOF OF AUTHENTICITY

Scars, tears, neck creases, insect bites etc. are natural sign of the animal's life in the nature. They do not affect the durability of the leather, its a certificate of authenticity. When exposed to sunlight vegetable tanned leather will change tone of color. Do not place your furnitures in direct sunlight. Warm and dry air will dry out the leather if it is not regularly treated.

MAINTAINANCE

We recommend Leather Master Protection Cream to protect the leather. When producing furniture or interior details we recommend to

treat the leather with Protection Cream before starting to use the products. When needed, use very small amounts of leather oil and grease. The leather can change look and hand-feel and can also get a darker color tone from these type of products. We recommend Tiptop, a natural wax from beeswax, lanolin oil and coconut fat.

CLEANING

When cleaning the leather we recommend Leather Master Soft Cleaner or a very mild leather soap. Some chemicals and cleaning detergents can effect the surface of the leather and make it duller. Always test a product on a smaller area of the leather before applying it on the whole hide.

If you have questions regarding specific stains, contact Leather Master for guidance.

DIDN'T FIND THE COLOR YOU WERE LOOKING FOR?

Contact us and we'll help you with custom colors. Please note: Special colors can only be ordered with a minimum quantity of 600 ft².

TECHNICAL REQUIREMENTS

Please note: Tärnsjö Garveri does not conduct its own testing of the leather's physical prop-

erties. Characteristics such as tensile strength, lightfastness, and colorfastness may vary depending on chemical usage and between different production batches. Feel free to contact us if you have specific requirements for your project.

UPHOLSTERY LEATHER

Upholstery leather is the thinnest and softest leather we offer. Thanks to its soft feel and flexibility, it is often used in upholstered furniture such as sofas and armchairs. It is also well suited for leather wrapping and apron-making.

When skived, upholstery

leather can be made even thinner and thus also used as shoe lining.

The hide's natural structure is part of the character of upholstery leather and can vary depending on the part of the hide – this is a natural feature and cannot be controlled.

Sold as whole hides, each about 45 square feet.
